Abel inequality, 117
abstract ergodic theorem, 81
acoustic feedback system, 139
adjoint operator, 43, 44
almost everywhere (a.e.), 15, 33
almost sure convergence, 275
Anosov diffeomorphism, 51, 52, 71–2
arcs, equivalent, 153
asymptotic periodicity, 86–90, 107, 131
asymptotic stability, 95, 176
  of Chandrasekhar–Münch equation, 344
  via change of variables, 141
  of convex transformation, 129
  of expanding mappings on manifolds, 160
  of fluid flow, 131
  of integral operators, 102, 105
  of integro-differential equations, 337–44
  of Lorenz equations, 124
  of monotonically increasing transformation, 119, 123
  proof via lower-bound function, 96, 175
  of quadratic transformation, 142
  relation to conditional entropy, 264
  relation to exactness, 100
  relation to Liapunov function, 105, 329–30, 336–7
  relation to statistical stability, 95
  of Rényi transformation, 119
  of stochastically perturbed systems, 280, 287
  of strong repellor, 129
  of transformations on R, 148
automorphism, 74

baker transformation, 48–50, 60–1, 74–5, 260
  relation to dyadic transformation, 50, 260
Birkhoff ergodic theorem
  continuous time, 170
  discrete time, 57
Boltzmann equation and entropy, 260
Borel measure, 14, 25–6
  on manifolds, 157
Borel sets, 14
Borel σ-algebra, 14
bounded variation, function of, 114–19
Brownian motion
  d-dimensional, 303
  one-dimensional, 294

Cartesian product, 24
Cauchy condition for convergence, 30
Cauchy–Hölder inequality, 23
Cauchy problem for Fokker–Planck equation, 322
cell proliferation, 301–2
Cesaro convergence, 27
  of Frobenius–Perron operator, 65–6
  of Koopman operator, 68
Chandrasekhar–Münch equation, 214, 341, 344
change of variables
  and asymptotic stability, 141–7
  in Lebesgue integral, 40–1
characteristic function, 5
Chebyshev inequality, 104, 273
Chebyshev polynomials, 145
classical solution of Fokker–Planck equation, 323
closed linear subspace, 83
compact support, 181
comparison series, 31
complete space, 30
complete measure, 27
conditional entropy, 255–6, 263–4
connected manifold, 156
constant of motion, 187
constrictive Markov operator, 87–8
continuous semigroup, 169
  of contractions, 178
  of contractions and infinitesimal operator, 200
  and ordinary differential equations, 187–8
continuous stochastic processes, 294
continuous stochastic semigroup, 175
continuous time stochastic process, 221–2
continuous time system
  and discrete time systems, 172, 219–20
  ergodic, 171, 172
  exact, 173, 297–302
  mixing, 172, 194–200
contracting operator, 34, 177
convergence
  almost sure, 275
  Cauchy condition for, 30
  Cesaro, 27
  comparison series for, 31
  in different L^p spaces, 29
  in mean, 274
  to set of functions, 87
  stochastic, 274
  strong, 27
  weak, 27
  weak Cesaro, 27
convex transformation, 128–30
counterimage, 5
counting measure, 14
counting process, 222
curvature, 199–200

cycle, 92
cyclical permutation, 92
cylinder, 195, 298

dense subset of densities, 99
density, 5, 10, 36
  of absolutely continuous measure, 36
  evolution of by Frobenius–Perron operator, 38, 215–17
  of random variable, 221
derivative
  right lower, 111
  strong, 181
determinant of differential on manifold, 158
diffeomorphism, 52
differential
  determinant of, on manifold, 158
  of transformation on manifold, 154
differential delay equation as semidynamical system, 164–5
differential equation as dynamical system, 164
discrete time stochastic process, 221–2
discrete time system
  and Poisson processes, 226–9
  as sampled semidynamical system, 219–20
  embedded in continuous time system, 220
distance
  between function and set of functions, 86–7
  in L^p spaces, 22
  on manifold, 156
dyadic transformation, 9, 61–2, 260
  related to baker transformation, 50
dynamical system, 165
  and exactness, 173
  ergodic, 171
  mixing, 172

elementary events, 220
endomorphism, 74
entropy, 249
  conditional, 255
  and exact transformations, 258, 260, 262
  and Frobenius–Perron operator, 257–60, 262
  and Hamiltonian systems, 257–8
  and invertible transformations, 257
  and Liouville equation, 260
  and Markov operators, 254–7
  of reversible and irreversible systems, 260
equivalent arcs on manifold, 153
ergodic Birkhoff theorem, 57, 170
ergodic dynamical system, 171
ergodic Markov operator, 72, 92
ergodic semidynamical system, 171
ergodic transformation, 53
ergodicity
  conditions for via Frobenius–Perron operator, 55, 65–6, 86, 194
  conditions for via Koopman operator, 54, 68, 189, 194, 204
  and Hamiltonian systems, 205
  and linear Boltzmann equation, 240–1
  illustrated, 63
  of motion on torus, 190–2
  necessary and sufficient conditions for, 53
  relation to mixing, exactness, and K-automorphisms, 73
  and rotational transformation, 56–7, 69–70, 171–2
essential supremum, 23
Euler–Bernstein equations, 315
events
  elementary, 220
  independent, 221
  mutually disjoint, 221
exact Markov operator, 72, 93
exact semidynamical system, 173
exact semidynamical system with continuous time, 297–302
exact semigroup of linear Boltzmann equation, 241
exact transformation, 62
exactness
  and entropy, 258, 262
  illustrated, 65
  necessary and sufficient conditions for via Frobenius–Perron operator, 65–6, 194
  of r-adic transformation, 70
  relation to dynamical systems, 173
  relation to ergodicity, mixing, and K-automorphisms, 62, 73, 76
  relation to statistical stability, 100–1, 143
  of transformations on torus, 162
expanding mappings, 158–62

factor of transformation, 75
finite measure space, 15
first return map, 219
fixed point of Markov operator, 35
fluid flow, 131
Fokker–Planck equation
  asymptotic stability of solutions, 330
  and Cauchy problem, 322
  classical solution, 323
  derivation of, 318–22
  existence and uniqueness of solutions, 323–4
  fundamental solution, 323
  generalized solution, 327
  for Langevin equation, 325, 332
  and Liouville equation, 329
  for second-order system, 335
  stationary solutions, 332, 333, 334, 336
  for stochastic differential equations, 318
  and stochastic semigroups, 327
forced oscillator, 136–8
Frobenius–Perron operator, 37, 173–4
  for Anosov diffeomorphism, 51–2
  for baker transformation, 48–50
  for dyadic transformation, 9
